Welcome to Lexington Family Chiropractic! Located near beautiful downtown Lexington, Massachusetts.

Dr. Robert W. Astapoveh has been helping patients in Lexington and surrounding communities since 1995 and is dedicated to delivering the highest quality Chiropractic care in a friendly, relaxed environment.

Service to our patients is the cornerstone of our existence and the basis for our growth and success.

Visit a chiropractor within 15 minutes of:

- Arlington
- Bedford
- Burlington
- Lincoln
- Waltham
- Watertown
- Winchester
- Woburn

at our Lexington, MA office.

Services

Chiropractic Techniques

Our office utilizes several different Chiropractic techniques, ranging from manual adjustment techniques like Diversified and Gonstead techniques, to low force adjustment techniques like Logan Basic, to instrument techniques like Activator technique, and table techniques like Cox Flexion/Distracton and Thompson Drop techniques. Dr. Bob believes that not all patients are suited for one single technique and his philosophy is to fit the technique to the patient and not

the patient to the technique. He believes this is the reason why his office has such a high success rate in treating cases such as lower back pain, sciatica, neck pain, headaches, mid back pain and many other conditions.

Cold Laser Therapy

Cold Laser therapy, also known as low level laser therapy, has been proven to be a safe and very effective method to promote healing. The laser device is FDA approved for the treatment of carpal tunnel syndrome and has shown incredible promise for the treatment of other acute and chronic pain conditions.

The treatment uses a low level laser beam (also called cold laser) directed at the area of injury or pain. The laser light increases cellular energy by promoting the production of ATP which is the energy producing compound that keeps cells alive. Many degenerative diseases are associated with low levels of intracellular energy.

Laser therapy has many benefits both short term and long term. In the short term, laser therapy has powerful anti-inflammatory and pain relieving effects. It has been shown to increase blood flow, decrease inflammation, and release endorphins which help to control pain.

Long term effects include faster tissue repair and regeneration. Scientific studies show that tissues can repair themselves once favorable cellular conditions are restored.

Laser therapy is safe and effective. It will decrease pain, enhance your recovery, and help you get back to the life you deserve.

Electrical/Interferential Muscle Stimulation

This type of therapy is performed with a muscle stimulation machine. An electrical stimulus is delivered to the treatment area to excite the muscles. The frequency of the stimulation can be altered to treat either acute (recent) pain or chronic (older) pain. The stimulation of the area releases hormones to help promote a natural pain blocker for the pain experienced. Tissue healing and increased blood circulation is also a positive effect from muscle stimulation.

Ultrasound Therapy

The sound waves produced by the ultrasound pass through the skin and cause a vibration of the local tissues. This vibration or cavitation can cause a deep heating locally though usually no sensation of heat will be felt by the patient. Ultrasound can produce many effects other than just the potential heating effect. It has been shown to cause increases in tissue relaxation, local blood flow, and scar tissue breakdown. The effect of the increase in local blood flow can be used to help reduce local swelling and chronic inflammation, and, according to some studies, promote bone fracture healing.

Intersegmental Traction

Intersegmental Traction is a way of inducing passive motion into the spine for the purpose of stretching spinal joints and increasing mobility. It is a therapeutic modality which utilizes rollers

along your back to produce motion at each individual joint segment. It also creates a pumping action to the discs between the bones in your spine, resulting in a healthier disc. An additional benefit, these rollers also vibrate which aids in muscle relaxation.

Diathermy

Diathermy is a therapeutic treatment most commonly prescribed for muscle and joint conditions. A form of shortwave, electro-magnetic therapy that passes the softer tissues and provides heat to denser tissues, diathermy relaxes the muscles and connective tissues, decreases muscle spasms, and accelerates the healing process by increasing circulation. Diathermy can also be used to accelerate recovery and reduce pain in sports injuries such as bursitis, strains, and sprains.

Flexion/Distractor Decompression

This treatment is a non-surgical, doctor-controlled, hands on spinal manipulation performed with the patient lying face down on a specially designed chiropractic instrument. This table permits the effective administration of flexion/distractor and decompression adjustment and manipulation.

Well researched and documented, flexion-distractor and decompression helps relieve spinal pain and return patients to their desired quality of life by

- dropping intradiscal pressure to as low as -192mm Hg
- widening the spinal canal foraminal area by 28%
- reducing pressure on the spinal nerves
- returning motion to the spinal joints

OFFICE HOURS

Monday

7:00am – 5:30pm

Tuesday

7:00am – 12:00pm

Wednesday

7:00am – 7:00pm

Thursday

Office Closed

Friday

7:00am – 5:30pm

Saturday

7:00am - 10:30am

Dr. Robert W. Astapoveh

Dr. Robert W. Astapoveh has been practicing Chiropractic in Lexington, MA since 1995. He is originally from Framingham, MA. He received his Doctorate in 1995 from Logan University of Chiropractic, St. Louis, MO where he graduated with honors. He completed 3 years of Post Doctoral study in Occupational Health and Ergonomics from Northwestern Health Sciences University, Bloomington, MN.

He is a member of the Massachusetts Chiropractic Society.

His practice, Lexington Family Chiropractic, welcomes patients of all ages. Dr. Astapoveh uses a variety of different Chiropractic techniques in his office which allows him to gently and effectively treat children, adults and seniors. Because of his prior training, he has special interest in ergonomics, repetitive stress injuries and how they relate to neck pain, back pain, headaches and conditions like Carpal Tunnel Syndrome.

Outside of his office, he enjoys playing basketball, weightlifting and reading. He is dedicated to his lifelong pursuit of health and wellness and shares that passion with his patients on a daily basis.

Dr. Jacob R. Astapoveh

Dr. Jacob R. Astapoveh is a dedicated chiropractor originally from Stow, Massachusetts. He earned his Bachelor of Science in Kinesiology from the University of Rhode Island in Kingston, Rhode Island, in 2021, graduating with honors. Dr. Jake recently completed his Doctor of Chiropractic degree at Northeast College of Health Sciences (formerly New York Chiropractic College) in Seneca Falls, New York, and graduated with honors in 2024.

Dr. Jake welcomes patients of all ages, using a variety of techniques to develop personalized treatment plans tailored to each individual's needs. Whether you are recovering from an injury, managing a chronic condition, or seeking to optimize your overall wellness, Dr. Jake works closely with you to ensure the most effective approach to treatment.

A passionate advocate for health and fitness, Dr. Jake enjoys spending his free time training for and competing in marathons and triathlons. In addition to his passion for endurance sports, he is also an avid weightlifter and has a background in powerlifting, competing in the USAPL federation. He has a special interest in working with active individuals, taking a personalized approach to help you continue enjoying the activities you love.
